

TIP OF THE MONTH

COMBINE REGIONS TO ENABLE MULTIPLE LANGUAGES IN THE SAME DOCUMENT

These instructions will show you how to add a new 'multi' region. This will allow you to combine 2 or more languages of different regions. Documents printed using a 2 language 'multi' region will print in the first language and then at the end of the first document print the second language. The effect on documents is to create 1 document containing 2 languages. For labels, the effect is to print 2 labels, 1 for each language.

Once created, this 'multi' region can be applied to a TO or selected when printing documents.

1. Go to Manage Region Settings – Add a New Region

2. The following screen will appear

3. Add the new region
 - a. Enter a Code and Name to represent the region languages
 - b. Tick 'For Print' and 'Virtual'. This will change the screen to allow the selection of different Regions
 - c. Select the required Regions and Save

Using the new region language

Once saved, the new 'multi' region language can be selected when printing
